EDUCATION

Boston University | 3.79 GPA

May 2028

B.S./M.S. in Data Science | Minor in Business Administration

Coursework: ML/AI, Grad Algorithmic Game Theory, Algorithms, Data Structures & Rust, ML for Business Analytics, Data Mechanics, Data Ethics, Probability, Applied Statistics, Linear Algebra, Discrete Math, Data Science w Python

TECHNICAL SKILLS

Languages: Python, Rust, PySpark, SQL, NoSQL, Bash, Git, R, JavaScript/TypeScript, HTML, CSS

Python libraries: PydanticAI, PyTorch, Scikit-Learn, Pillow (PIL), NumPy, Pandas, Seaborn, Matplotlib, FastAPI

Tools: GitHub, AWS, Docker, React, Next.js, PostgreSQL, Tailwind CSS, Flask, Poetry, Excel, AGILE, CI/CD

Interests: Classical Music, Basketball (GS Warriors), Weightlifting, Chess, History, Kinesiology, Personal Finance

EXPERIENCE

BU SPACE Lab | AI and Machine Learning Researcher

March 2026 – Present

- Developing PaperBuddy, an LLM-based reading assistant that turns passive reading into LLM-based tutoring utilizing **React, Python and Django**. Implemented in a **graduate data privacy course of 45 students**
- Iterated and tested on **50+ prompt architectures** to resist shortcut and off-topic requests; balanced text referencing, comprehension checks, breadth-first learning, and counterfactual reasoning
- Engineered a **RAG pipeline** over source PDFs increasing response accuracy by **79%**, created an analytics page for instructors to evaluate student engagement and accuracy on sample tests
- Automated CI/CD with **GitHub Actions** running **30** Playwright end-to-end tests against **Docker** backend

BU HackHardware Club | Vice President

September 2024 – Present

- Planned and co-developed a **45-participant Nerf Gun hackathon**, contributing to project management, funding proposals, documentation, bill of materials, catering, and outreach to enable event's launch at scale
- Contributed to budgeting and documentation for a **50-participant** robotics hackathon, secured **\$650** in donated hardware from sponsors, and onboarded 4 future members to an 8-person executive board

NGX Ventures | Backend Software Engineer

February 2026 – June 2026

- Constructed a real-time dynamic pricing engine using **Node.js** and **TypeScript** computing dataset prices from **10 weighted signals**
- Designed a streaming **ETL Pipeline** of 15 workers ingesting external feeds (SEC EDGAR, NOAA, GDELT)
- Integrated an **LLM judge** to classify events into impact scores, triggering repricing when multiple feeds agree

Quantum Aesthetics | Software Engineering Intern

June 2025 – August 2025

- Benchmarked MedGemma, Qwen 2.5, and Lingshu across 4 medical vision-language tasks (classification, VQA, bounding-box grounding, hallucination detection) producing a per-task model recommendation
- Developed Python data pipelines using **Pydantic AI**, **PIL**, **Ollama**, and **LM Studio** to automate multimodal benchmarking on dermatology datasets for **SkinGPT Mini**, a smaller, faster version of QA's flagship model
- Cleaned and preprocessed **7 datasets** for benchmarking tasks, designed a data pipeline running ~3,700 samples per model across 5 evaluation stages end-to-end, replacing manual per-model runs

PROJECTS

BU Innovation & Entrepreneurship | ConnectNIL

March 2026 – Present

- Developed a **full-stack NIL marketplace** using **TypeScript**, **Next.js**, **Supabase**, **Stripe**, and **AWS**, addressing lack of team-based infrastructure in the \$1B+ NIL market for smaller collegiate teams and brands
- Designed an **end-to-end deal lifecycle** with tailored team/brand discovery postings, multi-step contract negotiation and creation, athlete deliverable submission and approval, and secure Stripe-powered payments
- Built **token-based invite links** for team recruitment, **reCAPTCHA** and **Resend** powered email invitations

Boston University Spark! | DeafTones Emotion Analyzer

October 2025

- Engineered a multimodal AI auditory data streaming dashboard leveraging **Python**, **FastAPI**, and **Next.js** for feature extraction (tempo, energy, key detection) on project backend and display via **Luma Photon Flash**
- Integrated GPT-4o-mini through **Pydantic AI** structured prompting to compute a probabilistic distribution across 8 emotions; utilized chunked waveform analysis to handle **>1 MB/s of continuous auditory data**
